

Job Tracker Setup – React JS (Simple Lab Exam Project)

Project Idea

A simple job tracker where users can add job applications, view applied jobs, delete job entries, and track company and status.

Step 1: Install Node.js

Download Node.js from <https://nodejs.org> and install the LTS version.

Commands:

```
node -v  
npm -v
```

Step 2: Create React Project

Commands:

```
npx create-react-app job-tracker  
cd job-tracker  
npm start
```

Step 3: Open Project in VS Code

Install Visual Studio Code from <https://code.visualstudio.com> and open the job-tracker folder.

Step 4: Replace src/App.js

```
import React, { useState } from "react";  
import "./App.css";  
  
function App() {  
  const [company, setCompany] = useState("");  
  const [role, setRole] = useState("");  
  const [status, setStatus] = useState("");  
  const [jobs, setJobs] = useState([]);  
  
  const addJob = () => {  
    if (company && role && status) {  
      const newJob = {  
        id: Date.now(),  
        company,  
        role,  
        status,  
      };  
  
      setJobs([...jobs, newJob]);  
  
      setCompany("");  
      setRole("");  
      setStatus("");  
    }  
  };  
}
```

```

    } else {
      alert("Fill all fields");
    }
  };

  const deleteJob = (id) => {
    setJobs(jobs.filter((job) => job.id !== id));
  };

  return (
    <div className="container">
      <h1>Job Tracker</h1>

      <input
        type="text"
        placeholder="Company Name"
        value={company}
        onChange={(e) => setCompany(e.target.value)}
      />

      <input
        type="text"
        placeholder="Job Role"
        value={role}
        onChange={(e) => setRole(e.target.value)}
      />

      <input
        type="text"
        placeholder="Application Status"
        value={status}
        onChange={(e) => setStatus(e.target.value)}
      />

      <button onClick={addJob}>Add Job</button>

      <h2>Applied Jobs</h2>

      {jobs.map((job) => (
        <div key={job.id} className="card">
          <p><b>Company:</b> {job.company}</p>
          <p><b>Role:</b> {job.role}</p>
          <p><b>Status:</b> {job.status}</p>

          <button onClick={() => deleteJob(job.id)}>
            Delete
          </button>
        </div>
      ))}
    </div>
  );
}

export default App;

```

Step 5: Replace src/App.css

```

.container {
  width: 400px;
  margin: auto;
  text-align: center;
  font-family: Arial;
}

input {
  width: 90%;
  padding: 10px;
  margin: 10px;
}

button {
  padding: 10px 20px;
  background-color: purple;
  color: white;
}

```

```
border: none;
cursor: pointer;
}

.card {
border: 1px solid gray;
padding: 10px;
margin-top: 10px;
}
```

Step 6: Run the Project

Commands:

```
npm start
```

Open browser:

```
http://localhost:3000
```

Output Features

- ✓ Add Job Applications
 - ✓ Track Application Status
 - ✓ Display Job List
 - ✓ Delete Job Entries
-

Viva / Explanation

Technologies Used:

- React JS
- CSS
- JavaScript

Concepts Used:

- useState()
 - Event Handling
 - Array Methods
 - Form Handling
-

Short Lab Exam Explanation

This project is a simple job tracker developed using React JS. Users can add job application details including company name, role, and application status. The application displays all job entries dynamically and allows users to delete records.
